QUALIFYING PHYSICAL AGILITY TEST

The purpose of having a physical assessment as part of entry-level Firefighter candidate testing is to identify those candidates who possess adequate physical ability in the form of agility, strength, coordination and endurance. These physical abilities are necessary in order to function effectively and safely as a firefighter. Additionally, as it is a requirement of the fire academy for each candidate to demonstrate sufficient physical ability based on rigorous standards in the form of candidate physical ability testing (CPAT), it is imperative that in carrying out the selection process, an adequate method of physical assessment is employed.

The following physical agility test components are based on similar procedures in the CPAT and were selected in order to provide each candidate a reasonable and fair opportunity to pass while also ensuring that those who do pass do likely possess the ability to successfully perform CPAT by the conclusion of the Fire Academy training.

Standards: Pass/Fail. Each candidate must complete the following in the order they are listed and within the maximum allotted time. If a candidate fails to complete any component, or exceeds the total time allotted, then that candidate will have failed the examination and will not be allowed to continue on with the remainder of the examination.

Ladder Skills: The candidate must demonstrate the ability to climb a ladder. This is untimed.

Candidate has five (5) minutes and twenty (20) seconds to complete the following tests:

Timed Stair Climb: Candidate will wear a fifty (50) pound weight vest to simulate the weight of a self-contained breathing apparatus (SCBA) and firefighter protective clothing, with an additional twenty-five (25) pounds to simulate the weight of a high-rise hose pack. After a twenty (20) second warm-up period on the step mill the candidate shall walk continuously for three minutes at a stepping rate of sixty (60) steps per minute. Candidates are not permitted to hold on to anything while performing the stair climb.

Equipment Carry: Upon exiting the stair climb, twenty-five (25) pounds are removed from the weight vest and the candidate will remove two saws (one at a time) from a tool compartment and places them on the ground and then picks up both saws (one in each hand) and while walking carries them seventy-five (75) feet and back to the starting point (tool compartment) where they are placed back into the tool compartment one at a time.
